

Terminal Set Up

These instructions are designed to detail the process of setting up a new terminal to use Gold.

It is recommended that this procedure be carried out on the terminal being created to ensure the best use of the default settings.

All the required options are available on the System Management, Security menu.

The Terminal Identity File automatically creates and maintains a tcp.def file. Both are required for Classic view terminals to access Gold. The tcp.def file should not be altered manually.

Terminal Identity Maintenance

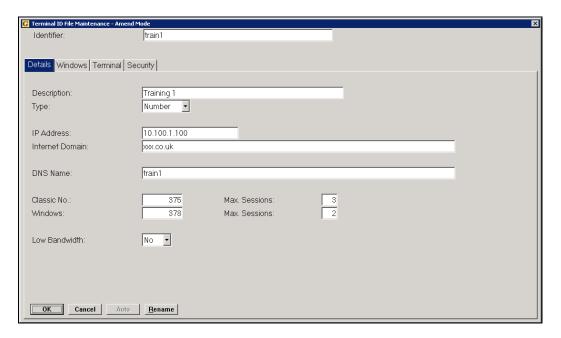

The majority of the required information is set up in the identity maintenance program.

To locate an existing terminal to amend enter the terminal identifier or enter a partial identifier followed by a star (*) to search. A list of existing terminals can be printed using the **List** (F5) function.

To set up a new Terminal use the **Insert** (F2) function. Enter the Identifier for the new terminal. This should be the computer name from Windows.

Details

This tab sets the terminal type and numbers used.

Fact Sheet 33 Rev0411 1 Terminal Set Up

	# indicates default	
Description		Enter the name of the terminal user or the
		description of its location.
		The details entered here will be displayed at
		the top of the menu screen.
		Entries could be names, e.g., "John Smith" or
		descriptions such as "Stores Counter".
Туре	Number #	- Standard Network Terminal Numbering.
	Base	- Terminal number selected from system id for
		Serial connections.
IP Address	Defaults to IP	Enter the IP (internet protocol) address or
	address of pc	machine name of the computer.
Internet Domain	Defaults to the	Enter the Internet Domain Name, usually the
	company	domain used for company email addresses.
	internet domain	E.g. ibcos.co.uk
DNS Name	Defaults to the	Enter DNS or computer name. This is the
	current	name by which the computer is known on the
	computer name	local area network.
Classic No.:	See auto option	Enter the Initial Terminal Number for Classic
	notes	View or 0 if Classic View is not used.
Max Sessions		Enter the maximum number of Classic view
		sessions available to the terminal.
_		100 in the Classic No field and a number of
	_	/erify (F4) function will allow the system to auto-
		mber with the specified number of sessions
_		<pre>/ >= in front of the entered number and will</pre>
		ninal number greater than or equal to the one
	for the number of	sessions specified.
Windows:		Enter the Terminal number to be used for
		Windows sessions or 0 if not used. The same
		terminal number is used for all windows
		sessions.
Note – entering a start number e.g. 100 in the Windows No field followed by the		
	n will allow the sys	tem to auto-detect the first available terminal
number.	1	
Max Sessions		Enter the Maximum number of available
		Windows sessions.
Low Bandwidth	Yes	Select 'Yes' if the terminal has low bandwidth
	No	available, for example at a remote depot.

Fact Sheet 33 Rev0411 2 Terminal Set Up

Windows

This tab is used to specify the user login details and the default data paths.

Key Entry Fields (# indicates default setting)

Login Name	PC/Windows Login	Enter the user's pc login name
Password	PC/Windows Login	Enter the user's pc login password
Windows Domain	E.g. Workgroup or Poole	Enter the Windows Domain Name.
Default Share	E.g. tmp	Enter the default share location on the local pc for use when transferring files.
Excel Option	Execute #	Select to run Excel and display the spreadsheet on export.
	Notify	Select to save the Excel export file to the default location and display the file name. Only for reports not list exports. (recommended setting if using terminal server).
Excel Path	Defaults to the standard excel path if a number of Windows sessions has been entered.	Enter the path to the Excel.exe file. This will be used to locate excel when running the report export option. E.g. C:\Program Files\Microsoft Office\ Office (or Office10)

Excel Data	Only applicable for	Enter the default directory to store
	Windows	exported Excel files for windows pc's,
		e.g. C:\tmp
		If Terminal Server is in use the path
		would be tmp.

Terminal

Use this page to enter the general details for the terminal including printer details and export information.

Security

Use this tab to specify the default company and depot for the terminal and which areas of the system may be accessed.

Fact Sheet 33 Rev0411 6 Terminal Set Up

Key Entry Fields

Rey Entry Fletus	1	
Default Company		Enter either '0' (zero) or the actual company number (0-999) that is required at the terminal. '0' will cause the system to ask for company number when logging in.
Default Depot		Enter either '0' (zero) or the actual depot number (in the range 1-9 or A-Y excluding N, O, P, Q and S) to be used by this terminal. '0' will cause the system to ask for depot number when logging in.
Change Default Company	Yes No #	If this is set to 'Yes' then an option will be available where appropriate to allow the user to change company. If this question is set to 'No' then the user cannot change company. If company number is set to '0' above then this option must be set to 'Yes'.
Change Default Depot	Yes No #	This operates in the same way as Change Default Company above using the same option.
Modules	Yes No #	Enter 'Yes' or 'No' against each individual module to determine whether that module is available on the main menu of the terminal in question or not.
