

# v2.4.3 Release Notes – Gold Service App

## New Features/Updates to Gold Service

Description	Reference
<p><b>Show each engineers data entries in the Comments tab of the App</b></p> <p>With the release of v2.4.3 of the Gold Service App, each engineer will be able to see the data the other engineers have entered onto the job.</p> <p>On the Comments tab of the App, engineers will be able to see each other's:</p> <ul style="list-style-type: none"> <li>▪ Story data (entered into the Story box of the App)</li> <li>▪ Labour Comments (entered into the comments box when they stop logging time on the App)</li> <li>▪ Internal Comments (entered directly into the Comments tab of the App)</li> </ul> <p>The Comments tab will be limited to showing the 50 most recent entries for each category. This data has been limited to ensure the performance of the App is not affected – particularly when it comes to repeatable jobs (where the data is not cleared down from the App even after the job has been invoiced).</p> <p>The first time an engineer opens the Comments tab on a job with a lot of data in it, they may experience a delay of a few seconds. This will only happen the first time they open the job. The data will then be cached and it will open instantly after that point.</p>	SA-1673

## Quality Improvements to Gold Service

Description	Reference
<p><b>Pull to refresh on Comment's tab not working (iOS only)</b></p> <p>Users were experiencing an issue with the pull to refresh function of the Comments tab when using an iOS device. When they refreshed the screen on the Comments tab, the data would not pull through and the time and date stamp would not update. This has been fixed.</p>	SA-1679
