Gold Service Mobile App - v2.4.4 Release Notes

Quality Updates

Version	Area	Category	Description	Ref
	App	Gold Service	**Gold Service Mobile App performs duplicate log in requests.** The Gold Service product has 2 types of licences: Gold Service and Gold Service 2.0 (which holds additional functionality). When a user attempted to log into the App, it would try and log into both types of licences, despite the user only being assigned to one version. Users have a certain number of attempts to log in correctly before they are locked out of the App. Because of these duplicate attempts, when users entered an invalid password attempt, they were being locked out of their account sooner than they should.	SA-1742
	App	Gold Service	**Make the words 'Enter Customer Name' more visible in the Signature Tab of the App** In the signature tab of the App, users were struggling to see where they should enter the customer's name after obtaining a signature. We have made the words 'Enter Customer Name' more visible to alleviate this issue. 	SA-1727
	App	Gold Service	**Unable to take or upload photos on some Android Devices** Users of Android devices were sometimes unable to take or upload photos on their device without the app crashing with a 'permissions denied' error. This issue has been resolved.	SA-1780
