

Classic Gold Update Guide

A clear, step-by-step walkthrough for updating your Classic Gold system.

Before you start, make sure you've got everything ready to go. Here's what you'll need:

- ✓ Root login details
- ✓ A recent backup (and remember to remove any backup devices from the server)
- ✓ Everyone logged out of Gold
- ✓ Access to any PC with Gold installed — or you can run the update directly on the Gold server

1. STEP BY STEP GUIDE

1. At the login prompt, type **root** instead of gold, then enter your **password**.

2. When you see the **#** prompt, type **reboot** and press **Enter**.

The screen may freeze — don't worry, that's completely normal. Just close the window using the **X** in the top-right corner, then wait about 5–10 minutes for the system to restart.

3. Once the system has restarted, open the window again and log in as root.

4. When you reach the **#** prompt, type **loadgoldcd** and press **Enter**.

5. You'll be asked if you wish to continue. Press **Y** to continue or **N** to cancel.

6. On the next screen, select **Load Gold 7.0 Software Update** by pressing **2** and hit **Enter**.

```
login: root
```

```
login: Tue Mar  3 11:24:39 GMT 2
ave mail.
Computers Ltd (On SLES 11 SP2)
# reboot
```

```
# loadgoldcd
```

```
Do you wish to continue [Y/n]
```

```
1) User Status      State
                   Date
                   Mode
2) Load Gold 7.0 Software Update DataHost
3) Load Price CD   WinHost
                   IndCode
4) Test CD Operation
```

7. The system will ask whether you have a recent successful backup. Press **Y** or **N**, then press **Enter** to confirm.

8. You'll now see several screens as the update runs. Let the process complete — this may take a few minutes.

9. When you see the **#** prompt again, type **reboot** just like before.

If it freezes, close the window using the **X** and wait about 5 minutes before reopening.

Have you got good backups [y/N]

Final Checks

Once the update has finished and everyone is still logged out, perform the following checks:

- **Check the Gold Version**

Log in to Classic Gold and press **Ctrl + Z** on your keyboard to open the About Gold window. Check that the version and date match the update you just installed. If it hasn't updated, contact Support.

- **Update the Menu System**

Go to **System Management > System Utilities > Update Menu System** to refresh the menu.

- **Acknowledge the Notification**

When you next log in, press **F3** to clear the update notification.

That's it — your Classic Gold system is now updated and ready for use!

If you also have Windows Gold, your Windows server will need rebooting and the version checked as well.
