

# What's new in Gold

May 12, 2025

Gold Version: 7.33.8

## Gold Operating System

- We have updated the application's infrastructure to ensure compatibility with newer versions of operating systems. This enhancement will enable customers to upgrade to operating systems beyond OpenSuse Leap 15.2 in the future. [Ref. 189]

## CLAAS Service Office PRO

- When labour messages were received from Service Office PRO, they were occasionally not being processed. An additional *buffer* time has been added to ensure labour is processed even if it is older than the last update by a few minutes. [Ref. 92]
- Jobs with a status of *Closed* will no longer receive any updates from Service Office PRO so as not to change the status of the job or update it once it has been batched for invoicing. [Ref. 158]
- When labour messages are received from CLAAS, only the job description of the first task was being updated to Gold. A change has been made to append descriptions from all tasks to the job story. [Ref. 159]
- Learn more about CLAAS Service Office PRO [here](#).

## John Deere Workshop Efficiency Tracker

- The OKTA configuration has been changed to allow Irish dealers to send workshop efficiency data to John Deere. [Ref. 454].
